

Company Profile 8: SmartHome Technologies (IoT Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Excellent	RC.IP-1	Identify Critical Technical and Non-Technical Assets	SmartHome Technologies must conduct a comprehensive discovery exercise to identify their critical technical and non-technical assets. Technical Assets include but are not limited to data centres, hosting services, servers, databases, data, software, models, and services. It is important to identify critical service components, as some services may have higher priority or sensitivity than others. Non-Technical Assets include but are not limited to people, processes, and intellectual property (IP). For example, safeguarding intellectual property and understanding how business processes can be restored in case of a cyber incident is critical to the business continuity of SmartHome Technologies.	List of Technical Assets for SmartHome Technologies:- Data Centres: Data processing and storage for IoT devices.- Hosting Services: Cloud services with Amazon Web Services (AWS).- Servers: 30 physical servers, 100 virtual servers.- Databases: Device data, usage statistics stored in MongoDB and MySQL.- Data: User data, device interaction data, sensor data.- Software: Home automation platforms, smart device management software.- Models: Predictive maintenance models, device behavior models.- Services: IoT device management, smart home integration.- Networking and Infrastructure: Wi-Fi and Zigbee networks for device communication.- Security Assets: End-to-end encryption, secure access control.- Development Tools: IoT software development kits (SDKs), CI/CD pipeline tools.- Communication Systems: Messaging platforms, IoT device communication protocols.- Compliance and Regulatory Reporting Systems: Compliance tools for data privacy and security standards.- Business Continuity and Disaster Recovery Systems: Cloud data backup, device recovery protocols.

Quality	ID	Function Name	Function Description	Function Outcome
				List of Non-Technical Assets for SmartHome Technologies:- People: IoT engineers, customer support, data analysts.- Intellectual Property (IP): Smart home algorithms, device interaction protocols.- Business Processes: Device onboarding, user support processes.- Technology: Smart home devices, networking hardware.
