

Company Profile 12: UrbanTech Solutions (Smart City Technology Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Good	RC.IP-1	Identify Critical Technical and Non-Technical Assets	UrbanTech Solutions should identify their critical technical and non-technical assets.	Technical Assets: - Data Centres: Smart city data repositories. - Hosting Services: Cloud hosting for urban analytics. - Servers: IoT-enabled city management servers. - Databases: Traffic data, energy usage data, citizen feedback databases. - Data: Real-time city metrics, sensor-generated data. - Software: Urban planning platforms, traffic control systems. - Models: Predictive models for traffic flow, energy efficiency. - Services: Smart grid management, city surveillance systems. - Networking and Infrastructure: IoT-enabled devices, secure citywide networks. - Security Assets: Firewall systems, data protection protocols. - Development Tools: Urban simulation platforms, CI/CD pipelines. - Communication Systems: City-wide communication platforms, collaboration tools. - Compliance Systems: Urban development and environmental regulations monitoring. - Disaster Recovery Systems: Data backups, emergency response protocols. Non-Technical Assets: - People: Urban planners, data analysts, IT teams. - Intellectual Property (IP): Proprietary urban solutions, traffic optimization algorithms. - Business Processes: Urban infrastructure planning, citizen engagement processes. - Technology: Smart sensors, surveillance hardware.
