

Company Profile 13: FoodChain Systems (Food Supply Chain Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Good	RC.IP-1	Identify Critical Technical and Non-Technical Assets	FoodChain Systems should identify their critical technical and non-technical assets.	Technical Assets: - Data Centres: Supply chain data centres. - Hosting Services: Cloud platforms for tracking systems. - Servers: High-performance logistics servers. - Databases: Supplier data, inventory management, distribution databases. - Data: Supply chain metrics, customer feedback data. - Software: Inventory management systems, route optimization software. - Models: Predictive models for food demand, waste reduction. - Services: Logistics tracking, supplier management systems. - Networking and Infrastructure: IoT-enabled supply chain devices, secure communication networks. - Security Assets: Encryption tools, access control systems. - Development Tools: Supply chain simulation tools, CI/CD platforms. - Communication Systems: Secure supply chain communication tools. - Compliance Systems: Food safety regulation monitoring. - Disaster Recovery Systems: Data backups, emergency logistics plans. Non-Technical Assets: - People: Supply chain managers, IT support teams. - Intellectual Property (IP): Proprietary logistics algorithms, supply chain process optimizations. - Business Processes: Supplier relationship management, quality assurance. - Technology: IoT devices for tracking, transportation hardware.
