

Company Profile 14: AeroLogix (Aviation Technology Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Good	RC.IP-1	Identify Critical Technical and Non-Technical Assets	AeroLogix should identify their critical technical and non-technical assets.	Technical Assets: - Data Centres: Aviation analytics data repositories. - Hosting Services: Cloud hosting for flight management. - Servers: Real-time flight tracking servers. - Databases: Pilot schedules, aircraft maintenance logs, passenger data. - Data: Flight performance data, weather data, air traffic data. - Software: Air traffic management platforms, predictive maintenance tools. - Models: Fuel efficiency models, flight delay prediction algorithms. - Services: Flight optimization solutions, real-time tracking systems. - Networking and Infrastructure: Secure aviation communication networks. - Security Assets: Firewalls, intrusion detection systems. - Development Tools: Aviation-specific simulation tools, CI/CD pipelines. - Communication Systems: Secure pilot communication systems. - Compliance Systems: Regulatory compliance tracking systems. - Disaster Recovery Systems: Flight data backups, emergency response plans. Non-Technical Assets: - People: Aviation engineers, flight operators. - Intellectual Property (IP): Proprietary flight planning algorithms, maintenance procedures. - Business Processes: Passenger onboarding workflows, regulatory compliance reporting. - Technology: Advanced navigation systems, real-time monitoring devices.
