
Company Profile 15: SafeRide Tech (Transportation and Mobility Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Good	RC.IP-1	Identify Critical Technical and Non-Technical Assets	SafeRide Tech should identify their critical technical and non-technical assets.	Technical Assets: - Data Centres: Vehicle telematics data centres. - Hosting Services: Cloud hosting for fleet management. - Servers: Real-time traffic and vehicle monitoring servers. - Databases: Ride-hailing, route optimization, and customer databases. - Data: Driver data, route data, vehicle diagnostics. - Software: Ride-sharing platforms, fleet tracking systems. - Models: Traffic prediction models, fuel efficiency optimizers. - Services: Mobility solutions, route optimization services. - Networking and Infrastructure: IoT-enabled vehicle tracking systems. - Security Assets: Data encryption, secure APIs. - Development Tools: Transportation simulation platforms, CI/CD pipelines. - Communication Systems: Driver communication tools, real-time alert systems. - Compliance Systems: Safety regulation tracking. - Disaster Recovery Systems: Data backups, emergency rerouting systems. Non-Technical Assets: - People: Drivers, operations managers. - Intellectual Property (IP): Proprietary route algorithms, safety tools. - Business Processes: Driver allocation workflows, passenger safety protocols. - Technology: Fleet management devices, vehicle tracking equipment.
