

Company Profile 17: AquaSmart Systems (Water Management Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Good	RC.IP-1	Identify Critical Technical and Non-Technical Assets	AquaSmart Systems should identify their critical technical and non-technical assets.	Technical Assets: - Data Centres: Water usage data repositories. - Hosting Services: Cloud platforms for water analytics. - Servers: Water quality and distribution servers. - Databases: Water supply, usage, and quality databases. - Data: Real-time water distribution data, treatment data. - Software: Water resource management platforms. - Models: Water demand forecasting, leak detection models. - Services: Smart water meters, water quality analytics. - Networking and Infrastructure: IoT-enabled water sensors, secure networks. - Security Assets: Data encryption, access control. - Development Tools: Water simulation software, CI/CD tools. - Communication Systems: Field worker communication platforms. - Compliance Systems: Environmental regulation monitoring. - Disaster Recovery Systems: Data backups, emergency water distribution plans. Non-Technical Assets: - People: Water resource engineers, IT specialists. - Intellectual Property (IP): Proprietary water quality testing methods. - Business Processes: Distribution planning workflows, quality assurance. - Technology: Advanced filtration systems, smart meters.
