

Company Profile 19: UrbanGreen Cities (Smart Urban Development Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Good	RC.IP-1	Identify Critical Technical and Non-Technical Assets	UrbanGreen Cities should identify their critical technical and non-technical assets.	Technical Assets: - Data Centres: Urban infrastructure data repositories. - Hosting Services: Cloud services for smart city data analytics. - Servers: IoT data servers for urban sensors. - Databases: Traffic patterns, energy usage, waste management. - Data: Real-time city monitoring data, utility usage statistics. - Software: Smart city management platforms, urban planning tools. - Models: Traffic flow optimization models, energy efficiency predictors. - Services: Smart lighting systems, waste collection optimization. - Networking and Infrastructure: IoT-enabled city monitoring networks. - Security Assets: Data encryption, secure IoT protocols. - Development Tools: Urban simulation software, CI/CD pipelines. - Communication Systems: City administration communication platforms. - Compliance Systems: Environmental and urban regulation monitoring. - Disaster Recovery Systems: Urban service redundancy, emergency communication tools. Non-Technical Assets: - People: Urban planners, data analysts. - Intellectual Property (IP): Proprietary urban planning models, smart city designs. - Business Processes: Resource allocation workflows, resident feedback systems. - Technology: Smart traffic systems, IoT-connected infrastructure.
