

Company Profile 7: GreenEnergy Solutions (Renewable Energy Industry)

Quality Function

Quality	ID	Function Name	Function Description	Function Outcome
Good	RC.IP-1	Identify Critical Technical and Non-Technical Assets	GreenEnergy Solutions should identify their critical technical and non-technical assets.	Technical Assets: -Data Centres: Renewable energy data repositories. -Hosting Services: Cloud platforms for energy analytics. -Servers: Physical and virtual energy monitoring servers. -Databases: Solar, wind, and hydroelectric performance databases. -Data: Energy production data, grid performance data, customer usage analytics. -Software: Energy management systems, predictive maintenance software. -Models: Energy load forecasting, renewable resource optimization. -Services: Smart grid monitoring, renewable energy consultations. -Networking and Infrastructure: IoT-connected energy devices, routers, secure networks. -Security Assets: Firewalls, intrusion detection systems, encryption tools. -Development Tools: Renewable energy simulation tools, CI/CD pipelines. -Communication Systems: Secure communication tools, collaboration platforms. -Compliance Systems: Environmental regulations compliance monitoring. -Disaster Recovery Systems: Energy data backups, contingency plans for grid failures. Non-Technical Assets: -People: Energy engineers, customer support st -Intellectual Property (IP): Proprietary renewable designs, algorithms for efficiency.

-Business Processes: Energy production planning, regulatory reporting.

-Technology: Green energy infrastructure, operational hardware.
